New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastroduodenal diseases. Claim 5; Page 156; 184pp; English.

This 3' primer is used with a 5' primer (see AAV07971) in the PCR amplification of Helicobacter, e.g. Helicobacter pylori, genomic DNA in order to obtain DNA (see AAV07964) encoding the a 50 kDa polypeptide (see AAW73035) designated GHPO 750. The isolated polynucleotide, and encoded

                                                                                                                                                                                                                                  This DNA sequence codes for a 50 kDa Helicobacter pylori polypeptide (see AAW73015) designated GHPO 750. A polynucleotide encoding GHPO 750 can be obtained from genomic DNA by PCR amplification (see AAW7971-72. The invention provides polynucleotides (see AAW72001, AAW07912-21 and AAW73022-32), GHPO 750 and a 32 kDa polypeptide (see AAW73034). These polynucleotides were initially identified in a search of H. pylori genomic databases. DNA cassettes for expression of the Helicobacter proteins (unprocessed or mature forms) in prokaryotic or eukaryotic cells are provided. The polynucleotides can be used in vaccines to prevent or are provided.
New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastroduodenal diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               treat Hb infection in a mammal. Viral (especially poxvirus) or bacterial vectors are used. Products and methods of the invention allow treatment and prevention of gastroducdenal diseases associated with Hb infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and atrophic gastritis, and peptic ulcer methods are also provided. GHPO 750 was demonstrated to be a protective antigen. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunoreactivity with H: pylori-positive antisers. The proteins are highly immunogenic and induce a long-lasting immune response that persists even after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunogenic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm eradication of infection, and in vaccines to protect against H. pylori infection and related diaeases (gastritis, peptic ulcer, gasinst H. pylori infection and related diaeases (gastritis, peptic ulcer, gasinst Codenocarcinoma/lymphoma). (Updated on 20-MAR-2003 to correct PF field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence encodes a Helicobacter pylori antigenic protein that is characterised by immunosactivity with H. pylori-positive antisera. The proteins are highly immunosactivity with H. pylori-positive antisera. The proteins exent after antimicriobial treatment. In antibody-detection assays, on sera, plasma, urine, saliva etc., they are highly sensitive and specific. The specification also describes 69 previously unrecognised immunosanic cluster families. H. pylori antigens are used to detect H. pylori-specific antibodies, for diagnosing infection or to confirm exadication of infection, and in vaccines to protect against H. pylori infection and related diseases (gastritis, peptic ulcer, gastric adenocarcinoma/lymphoma).                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                               ô
                                                                                  The invention describes a complex of protein-protein interactions in Helicobacter pylori selected from 421 complexes given in the specification. The complex of protein-protein interactions are useful for screening for agents which modulate the interaction of proteins. Modulating compounds which binds to a targeted bacterial protein may be used for treating or preventing ulcers in a human or animal. This sequence represents a primer used to isolate polynucleotides encoding Helicobacter pylori proteins for studies on protein-protein interactions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes

                           coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, beeudomonas aeruginosa and Enterococcus facealis. The invention is also useful for the identification of potential new targets for artibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, and to obtain antibodies capable of binding to the expressed proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The antisense nucleic acid sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence encodes an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
and the encoded proteins. The prokaryotes used are Escherichia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of

nucleic acid; (2) a nost cell containing the vector; (3) an isolated pulpapeptide or its fragment whose expression is inhibiting by the antisense nucleic acid; (4) an antibody capable of specifically binding callular prolypeptide; (5) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for che gene produce or that has an activity against a biological pathway required for proliferation, or that inhibits callular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway required for proliferation or the biological pathway in which a proliferation-required gene or its gene product is one a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiocic; (10) profiling a compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or compound's activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent or owhich each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for dengined for proliferation in cells other than $S$. Typhimurium, $C$ of the grand genes of the present sequence is one of the target or cequired for proliferation in cells other than $S$. Typhimurium, $C$ or the printed specification, but was obtained in celectronic format directly from WIPO at $C$ or the present sequence and the coll of the printed pot sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö

This 3' primer was used with a 5' primer (see AAV07967) in the PCR amplification of Helicobacter pylori strain ORV2001 genomic DNA in order to obtain DNA (see AAV07964) encoding a 50 kDa polypeptide (see AAW73035) designated GHPO 750. The primer pair includes a 5' clamp and BamHI and XhoI restriction enzyme reocgnition sequences for cloning purposes. The PCR product was ligated into vector pET28a, and recombinant polypeptide was expressed as a histidine-tagged fusion protein in E. coli host cells. The polypeptide can be used to develop vaccines for the treatment and prevention of Helicobacter infections. (Updated on 25-MAR-2003 to correct PI field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                metabolite by a fungua. This involves modulating the expression of at least one ZBC (zinc binuclear cluster protein) gene in a manner to improve the yield of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite e.g. antibacterial (such as beta-lactam), an anti-hypercholesterolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A),
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New method for improving the production of a secondary metabolite e.g. antineoplastic agent, ergot alkaloid from a fungus involves modulation the expression of at least one zinc binuclear cluster protein gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to improving the production of a secondary

New method for improving the production of a secondary metabolite e.g. antineoplastic agent, ergot alkaloid from a fungus involves modulation of the expression of at least one zinc binuclear cluster protein gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Secondary metabolite; fungus; ZBC gene; zinc binuclear cluster protein; antibacterial; beta-lactam; anti-hypercholesterolaemic; lovastin; mevastatin; immunosuppressant; cyclosporin A; ergot alkabloid; ergotamine; angiogenesis inhibitor; ovalicin; glucan synthase inhibitor; gliotoxin; fungal toxin, cell surface receptor; plant growth regulator; pigment; insecticide; antineoplastic; gene; ds.
an ergot alkaloid (such as ergotamine), an angiogenesis inhibitor (such as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, a fungal toxin, a modulator of cell surface receptor signalling, a plant growth regulator, a pigment, an insecticide, or an antineoplastic compound. The method results in a decrease in fermentor run-time, a equivalent amounts of the fermentor required for the production of equivalent amounts of the secondary metabolite, or a decrease in the binass required for the production, which translates into decreased in records ABN794-ABN79911 represent ZBC genes of the sequences given in records ABN7974-ABN79911 represent ZBC genes of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to improving the production of a secondary metabolite by a fungus. This involves modulating the expression of at least one ZBC (zinc binuclear cluster protein) gene in a manner to improve the yield of the secondary metabolite. Methods of the invention may be used for improving the production of the secondary metabolite e.g. antibacterial (such as beta-lactam), an anti-hypercholestrolaemic (such as lovastin or mevastatin), an immunosuppressant (such as cyclosporin A), an ergot alkaloid (such as ergotamine), an angiogenesis inhibitor (such

as ovalicin), a glucan synthase inhibitor, gliotoxin family of compounds, growth regulator, a modulator of cell surface receptor signalling, a plant growth regulator, a pigment, an insecticide, or an antineoplastic compound. The method results in a decrease in fermentor run-time, a decrease in the size of the fermentor required for the production of equivalent amounts of the secondary metabolite, or a decrease in the biomass required for the production, which translates into decreased in records ABN79764-ABN7911 represent ZBC genes of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present differentiating between healthy haematopoietic cells and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          disorders, comprises contacting a target nucleic acid with a reagent tl

The present invention describes a method for detecting and differentiating between haematopoietic cell proliferative disorders associated with at least 1 gene and/or their regulatory regions in a subject. The method comprises contacting a target nucleic acid in a biological sample obtained from the subject with at least 1 reagent, which distinguishes between methylated and non-methylated CpG dinucleotides within the target nucleic acid. ABZ09861 to ABZ11118 represent specifically claimed nucleotide sequences from the present invention. Oligonucleotides from the present invention can be used: for differentiating between healthy haematopoietic cells and proliferative Claim 28; SEQ ID NO 335; 117pp; English.

The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid relukaemia, Alzheimer's disease, Alzheilepsy, neurofibromatoaid rheumatoid arthritis, psoriasis and inflammatory/ulcerative bowel diseases. The present sequence is a gene of the invention

Sequence 8333 BP; 1968 A; 183 C; 2037 G; 4145 T; 0 U; 0 Other;

Nucleic acid comprising fragment of chemically modified gene, useful for diagnosis and treatment of diseases associated with abnormal cytosine methylation.

Sequence 14700, Application US/09949016

Batent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

ITILE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF;

FILE REPERBENCE: CLOOD.1307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: US/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-10-03

PRIOR PILING DATE: 2000-09-08

NUMBER OF SEC ID NOS: 207012

SOCTHAND APPLICATION NUMBER: (0/231,498

| Sequence 317, Application US/09422978 |
| Patent No. 6537751 |
| GENERAL INFORMATION: |
| APPLICANT: Cohea, Daniel |
| APPLICANT: Chumakov, 11ya |
| TITLE OF INVENTION: Blailelic markers for use in constructing a high density... |
| TITLE NEPRIENCE: GENNET.020CP1 |
| CURRENT PILING DATE: 1999-10-20 |
| EARLIER PPLICATION NUMBER: US 60/298,850 |
| EARLIER PPLICATION NUMBER: US 60/109,732 |
| EARLIER PILING DATE: 1998-11-23 |
| WUMBER OF SEQ ID NOS: 11796 |
| SEQ ID NO 317 |
| LENGTH: 47
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  US-10-101-4644-856

US-10-101-4644-856

Paquence 856 Application US/10101464A

Patent No. 6768041

GENERAL INFORMATION:

APPLICANT: Strabala, Timothy

APPLICANT: Nieuwenhuizen, Nicolaas

APPLICANT: Higgins, Collean M.

TITLE OF INVENTION: Compositions Isolated from Plant Cells

TITLE OF INVENTION: Compositions Isolated from Plant Cell Signaling

FILE REFERENCE: 11000-10200-2

CURRENT APPLICATION NUMBER: US/10/101,464A

CURRENT FILING DATE: 2002-03-18

PRIOR FILING DATE: 2000-11-01

PRIOR FILING DATE: 1999-01-12

PRIOR FILING DATE: 1999-01-12

PRIOR FILING DATE: 1999-01-01

/tissue_Type="arbuscular mycorrhiza"
/dev_stage="harvested 3 weeks post inoculation with Glomus intraradices"
/clone_lib="mkDe"
/clone_lib="mkDe"
/clone_lib="mkDe"
/clone_Type="serilised seeds were germinated for 7h at 25 C, before transplanting into a 1/3 Epoisses soil: 2/3 calcined Terragreen mix in the presence of onion root fragments colonized by the arbuscular mycorrhizal fungus Glomus intraradices (Schenck & Smith, isolate LipA8). The plants were watered every day and twice a week with a modified nutrient Long Ashton solution without phosphate but with a high level of nitrate. After 3 weeks with a modified nutrient Long Ashton solution without phosphate but with a high level of nitrate. After 3 weeks my was extracted from whole root systems. CDNA was prepared from polyah-enriched RNA. The cDNA was prepared from polyah-enriched RNA. The cDNA was directionally ligated into Unizap XR vector from Stratagene and packagin stracts. Plasmids containing cDNA inserts were mass-excised from phage stocks using ExAssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, Evry, France). Note: EST may be of fungal origin."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                   Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
Trypansoma brucei (TREU927/4 GUTAt 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shorgun sequencing projects. In
Genome Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barrell, Oxford University Press, 1999).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Tomb J, Miller C, Lissolo L, Kleanthous H,

Algarawi A; WPI; 1998-568251/48. New isolated Helicobacter polynucleotides - used to develop products for the diagnosis, prevention and treatment of Helicobacter infections and gastroduodenal diseases. Claim 5; Page 156; 184pp; English. This 5' primer is used with a 3' primer (see AAV07972) in the PCR amplification of Helicobacter, e.g. Helicobacter pylori, genomic DNA in order to obtain DNA (see AAV07964) encoding the a 50 kDa polypeptide (see AAW73035) designated GHPO 750. The isolated polynucleotide, and encoded

A polynucleotide encoding GHPO 750 can be obtained from genomic DNA by PCR amplification (see AAW73912-21 and invention provides polynucleotides (see AAW72001, AAV07912-21 and AAV07952-32), GHPO 750 and a 32 kDa Helicobacter polypeptides (see AAW7302-32), GHPO 750 and a 32 kDa polypeptide (see AAW73034). These polynucleotides were initially identified in a search of H. pylori genomic databases. DNA cassettes for expression of the Helicobacter proteins (unprocessed or mature forms) in prokaryotic or eukaryotic cells are provided. The polynucleotides can be used in vacciness to prevent or treat Hb infection in a mammal. Viral (especially poxvirus) or bacterial vectors are used. Products and methods of the invention allow treatment in prevention of gastroduodenal diseases associated with Hb infections, including acute, chronic, and atrophic gastritis, and peptic ulcer including acute, chronic, and atrophic gastritis, and peptic ulcer diseases, e.g. gastric and duodenal ulcers. Diagnostic and detection methods are also provided. GHPO 750 was demonstrated to be a protective
                                                                                                        ö
polypeptide, can be used to develop vaccines for the treatment and prevention of Helicobacter infections. (Updated on 25-MAR-2003 to correct PI field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated Helicobacter polymucleotides - used to develop products for
the diagnosis, prevention and treatment of Helicobacter infections and
gastroduodenal diseases.

AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)

amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
activity, and can be used in gene therapy and vaccine production. (I)
proteins and polynucleotides may be used in the prevention, diagnosis and
treatment of diseases associated with inappropriate (I) expression. For
example, they may be used to treat disorders associated with decreased
expression by rectifying mutations or deletions in a patient 's genome
that affect the activity of (I) by expressing inactive proteins or to
supplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients own production of (I). Additionally, (I)
cupplement the patients of host cell and culturing the cell to express the
cucies acids into a host cell and culturing the cell to express the
concerns and cancer metastesses of haematopoietic-aride cells. AAK67703
concerns and cancer metastesses of haematopoietic antigen genomic
sequences from the present invention. AAK879912 to AAK87950 and AAM82169
ceptesent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Nucleic acids encoding human immune/hematopoietic antigen polypeptides, useful for preventing, diagnosing and/or treating cancers and metastasis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gape

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening defencing of bloactive agent capable of binding to Carcinoma Associated Protein (CAP); (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for inhibiting the activity of CAP; (vi) for inhibiting the activity of CAP; (vii) for treating carcinoma; (vii) for inhibiting the effect of CAP; (vii) for treating carcinoma; (vii) for neutralizing the effect of CAP; (vii) for the carcinoma or a propensity to carcinoma; and (xi) for determing Carcinoma Associated (CA) gene copy number. In addition, the CAP genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New Alloiococcus otitidis polynucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring of
                                                                                                                                                                                                             Recombinant nucleic acid useful for diagnosis and treatment of carcinoma

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to cancer-associated proteins (CAP) and the cancerassociated (CA) nucleic acids encoding them. The invention also relates to associated (CA) nucleic acids encoding them. The invention also relates to a method for treating cancers involving administering to a patient an inhibitor of CAP, and a method of screening for anticancer activity in a potential drug involving providing a cell that expresses a CA gene, contacting a tissue sample derived from a cancer cell with an anticancer on expression of the CA gene. The CAP proteins are useful for detecting cancer associated with expression of a CAP protein in a test cell sample of and for screening for a bioactive agent capable of modulating the activity of a CAP protein. The CA nucleic acids are useful for diagnosing cancer, involving determining the expression of a CA nucleic acid in a tissue sequence represents a human CA gene of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

The present invention describes an isolated polymucleotide (I) of
Alloiococcus otitidis genomic DNA, which encodes an antigenic protein.
Alloiococcus otitidis as a Gram-positive bacterium. Also described:
C Alloiococcus otitidis as a Gram-positive bacterium. Also described:
C an isolated polypeptide that is encoded by the polymucleotide (I), its
c an isolated polypeptide that is encoded by the polymucleotide (I), its
complement, despenante variant or fragment; (3) a genetically engineered
those cell, transfected, transformed or infected with the vector of (2);
(4) an antibody specific for the polypeptide of (I); (5) an immunogenic
composition comprising the polypeptide, its complement, biological
equivalent or fragment, or the polymucleotide that is comprised in the
expression vector; (6) a pharmacoulical composition comprised in the
c expression vector; (6) a pharmacoulical composition comprised in the
c expression vector; (6) a pharmacoulical equivalent or fragment;
c of the polypeptides of (1), their biological equivalent or fragment;
c of the polypeptides of (1), their biological equivalent or fragment;
c ortificial in the biological sample; (10) a kit comprising an array
c of the antibody of (4); and (11) producing a polypeptide by culturing the
c ortificially enpiacered host cell under conditions suitable to produce the
c polymucleotides, polypeptides, antibodies and compositions of the present
c mortaning the novel polymucleotide, its degenerate variant or fragment,
c polymucleotides, polypeptides, antibodies and compositions of the present
c polymucleotides are useful for expressing and detecting Alloiococcus
c threating and monitoring of effects during drug clinical trials.

The polymucleotides are useful for expressing and detecting Alloiococcus
cottidis. The polymore encodes an Alloiococcus otitidis antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes an isolated polymucleotide (1) of Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. Alloiococcus otitidis genomic DNA, which encodes an antigenic protein. Alloiococcus otitidis is a Gram-positive bacterium. Also described: (1) an isolated polypeptide that is encoded by the polymucleotide (1), (12) an expression vector comprising the novel isolated polymucleotide (1), (12) an expression vector comprising the novel isolated polymucleotide (1), (2); (4) an antibody specific for the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1); (5) an immunogenic composition comprising the polypeptide of (1); (6) a pharmaceutical composition comprising the carrier; (7) a protein chip comprising the carrier; (6) a pharmaceutical composition comprising an array of the polypeptide of (1) and a carrier; (7) a protein chip comprising the comprision polypeptide of (1); their biological equivalent or fragment; (8) immunogenic composition; (9) detecting and/or identifying Alloiococcus critidis in the biological sample; (10) a kit comprising a container containing the novel polymucleotide, its degenerate variant or fragment, or the antibody of (4); and (11) producing a polypeptide by culturing the collure. (1) can be used in gene therapy. The colypeptide from the culture. (1) can be used in gene therapy. The colypeptide from the culture. (1) can be used in gene therapy. The colypeptide sare useful for expressing and detecting Alloiococcus cultidis. The present sequence represents the entire genome of the process of the invention of the collider.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                 New Alloiococcus otitidis polymucleotides and polypeptides, useful for treating and diagnosing diseases, drug screening assays and monitoring of effects during drug clinical trials.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1754382 BP; 484756A; 391265C; 387369G; 490992T; 0U; 0Other;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to novel genes (AAL34669-AAL37666) and proteins (ABB03087-ABB04109) associated with the musculoskeletal system useful for preventing, treating or amellorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the arenal gland, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolyvic anaemia, autoimmune thyroiditis, allergies, autoimmune haemolyvic anaemia, autoimmune thyroiditis, arthritis and ulcerative colitis, (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, cortained in electronic format directions Note: The sequence data for this patent did not form part of the printed specification, but was constant and processed and pr

The invention relates to novel genes (AALJ4669-AALJ7666) and proteins (ABB00187-ABB04109) associated with the musculoskeletal system useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The mucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Cronh's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy, and (f) infectious diseases such as viral, batent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Isolated polypeptide for treating, preventing and/ or prognosing disorders related to the musculoskeletal system including musculoskeletal cancers and also for testing and detection e.g. diagnosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful CC for detecting disorders, e.g., cancer or cancer metastases, in animals or humans. The nucleic acid stimulates re-vascularisation of ischaemic tissues associated with conditions increats wounds due to injuries, and other cardiovascular conditions; treats wounds due to injuries, burns, post-operation telimulates neuronal growth; can treat and prevent conditions, such as, Alzheimer's disease, parkinson's disease, and AIDS-conditions, such as Alzheimer's disease, Parkinson's disease, and AIDS-conditions, such as Alzheimer's disease, Parkinson's disease, and AIDS-conditions and periodontal regeneration and aid in tissue transports or bone grafts; prevents akin aging due to sunburn by stimulating cartivate hair-forming cells and promotes melanocyte growth; stimulates crowth prevents hair loss, since FGF family members activate hair-forming cells and promotes melanocyte growth; stimulates commaniation of hematopoietic cells and bone marrow cells chances tissue of mesodermal origin to differentiate in early embryonic stem cells, besides, haematopoietic lineage; modulates mammalian conference of adipose tissue, pigmentation, size, and shape (e.g., such as, body height, weight, hair colour, eye colour, chin, percentage of adipose tissue, pigmentation, size, and shape (e.g., shin, percentage of adipose tissue, pigmentation, size, and shape (e.g., shin, percentage or physical state by infiltunencing blooming chartes for physical state by infiltunencing blooming chartes for physical states by infiltunencing blooming chartes for confidencing controllers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                depression, tendency for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, libido, memory, or stress; increases or decreases storage capabilities, far content, libido, protein, carbohydrate, vitamins, minerals, cofactors or other nutritional components. This sequence encodes a novel human musculoskeletal system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   antigen. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the US patent office at
                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid molecules encoding musculoskeletal system
associated polypeptides, useful for detecting disorders, e.g. cancer.

The invention describes an isolated nucleic acid molecule comprising a sequence encoding musculoskeletal system associated polypeptides useful for detecting disorders, e.g., cancer or cancer metastassa, in animals or humans. The nucleic acid; stimulates re-vascularisation of ischaemic tissues associated with conditions such as thrombosis, arteriosclerosis, and other cardiovascular conditions; treats wounds due to injuries, and other cardiovascular conditions; and ulcers; stimulates angiogenesis and limb regeneration; stimulates neuronal drowth; can treat and prevent neuronal damage occurring in certain disorders or neurodegeneration conditions, such as, Alzheimer's disease, Parkinson's disease, and AlDS-conditions, such as, Alzheimer's disease, Parkinson's disease, and AlDS-related complex; stimulates chondrocyte growth, thus they can be used to enhance bone and periodontal regeneration and aid in tissue transports or conditions, and all forming cells and promotes melanocyte growth, stimulates activate hair forming cells and promotes melanocyte growth, stimulates activate hair forming cells and promotes melanocyte growth, stimulates activate hair forming cells and promotes melanocyte growth, stimulates activate hair forming cells and promotes melanocyte growth, stimulates activate hair forming cells and promotes manualian organs before transplantation of for supporting cell culture of primary tissues; increases or decreases the differentiation or proliferation of embryonic stem cells, besides, haematopoietic lineage; modulates mammalian comments state by influencing biorhythms, caricadic rhythms, extension, tendency for violence, tolerance for pain, colour, eye copabilities, hormonal or endocrine levels, appetite, libido, memory, or stress; increases or decreases tissue or decreases expanded to the protection of embory or stress; increases or decreases encodes a novel human musculoskeletal system components. This sequence encodes a novel human musculoskeletal system components. This sequence encodes a novel hum

                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel isolated musculoskeletal system-associated nucleic acid molecule. The nucleic acid of the invention demonstrates cytostatic and osteopathic activities and may be useful for preparing a medicament for preventing, treating or ameliorating a medical condition such as cancer of the musculoskeletal tissues or osteoporosis, possibly via gene therapy or vaccine production. The current sequence is that of the human musculoskeletal system-associated genomic DNA of the invention. The current sequence is not shown within the specification per se but is available on the USPTO web-site
                                                                                                                                                                                                                                                           cancer of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            musculoskeletal system; cytostatic; osteopathic; cancer; osteoporosis;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to a novel isolated musculoskeletal system-
associated nucleic acid molecule. The nucleic acid of the invention
demonstrates cytostatic and osteopathic activities and may be useful for
preparing a medicament for preventing, treating or ameliorating a medical
condition such as cancer of the musculoskeletal tissues or osteoporosis,
possibly via gene therapy or vaccine production. The current sequence is
that of the human musculoskeletal system-associated genomic DNA of the
invention. The current sequence is not shown within the specification per
se but is available on the USPTO web-site
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New nucleic acid molecule, useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer of musculoskeletal tissues or osteoporosis.

3 Fatent No. 6812339

3 FALEANT: VENTER 100

4 APPLICANT: VENTER 100

5 TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

7 TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

7 TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

7 FILE REFERENCE: CL001307

7 CURRENT APPLICATION NUMBER: G0/241,755

PRIOR PELING DATE: 2000-10-20

7 PRIOR PELING DATE: 2000-10-03

7 PRIOR PELING DATE: 2000-09-08

7 PRIOR FILING DATE: 2001-03

7 PRIOR FILING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 87475, Application US/09949016

Sequence 87475, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT FILING DATE: 2000-04-14

Sequence 1713. Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: 06/241,755

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: PastSEQ for Windows Version 4.0

FORMARE: PastSEQ for Windows Version 4.0

GENERAL INFORMATION:

Patent No. 6812339
GENERAL INFORMATION:
Patent No. 6812339
GENERAL INFORMATION:
PAPILICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF
CURRENT APPLICATION NUMBER: US/09/949,016
CURRENT PILING DATE: 2000-04-14
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-20
PRIOR FILING DATE: 2000-10-03
PRIOR FILING DATE: 2000-00-06
PRIOR PRIOR FILING DATE: 2000-09-06
PRIOR FILING DATE: 2000-09-06
